

Video Title: Manufacturing and Engineering

Video Description: Engineers at Merck have the opportunity to work on the development and formulation of new medicines and vaccines to improve patient care. Associate Scientific Director Aaron Cote explains his experience in the chemical process development commercialization group.

Aaron Cote, Associate Scientific Director

I am scientist I am an engineer I like to solve problems.

Aaron

:06

I oversee the development of crystallization processes that go on in my department and also in the process research area which is part of MRL so it's a very technical role but certainly there is a managerial component a lot more focused on strategies specifically a lot of cross promotional strategies with colleagues in the formulation area.

Aaron

:28

You get to see so much good science and you are solving many problems and in my particular group we see a lot of problems and I have probably worked on over 50 crystallizations over the past few years and everyone is unique and every problem its unique and has its own challenges and own frustrations it own rewards and you are constantly learning.

Aaron

:49

The favorite thing about my role and my experience has probably been that there is so much going on and so many opportunities to get involved in so many different things.
